EventOS Software Requirements Specification (Draft v1.0)

This is the foundational draft of the EventOS Software Requirements Specification. It establishes the product vision, architecture, roadmap, modules, engineering standards, and planning framework. It is intended to be expanded into a complete 80–120 page specification during development.

1. Executive Summary

Vision, mission, objectives, product scope, stakeholders, business goals.

Detailed content to be completed collaboratively during implementation. Each chapter will expand into multiple sections including diagrams, requirements, user stories, acceptance criteria, and engineering decisions.

2. Product Overview

Target users, customer segments, supported event types, SaaS positioning.

Detailed content to be completed collaboratively during implementation. Each chapter will expand into multiple sections including diagrams, requirements, user stories, acceptance criteria, and engineering decisions.

3. Market Research

Competitor analysis, SWOT, differentiation strategy.

Detailed content to be completed collaboratively during implementation. Each chapter will expand into multiple sections including diagrams, requirements, user stories, acceptance criteria, and engineering decisions.

4. Personas

Organizer, attendee, volunteer, finance manager, speaker, sponsor.

Detailed content to be completed collaboratively during implementation. Each chapter will expand into multiple sections including diagrams, requirements, user stories, acceptance criteria, and engineering decisions.

5. User Journeys

Registration, organization setup, event lifecycle, ticket purchase, check-in.

Detailed content to be completed collaboratively during implementation. Each chapter will expand into multiple sections including diagrams, requirements, user stories, acceptance criteria, and engineering decisions.

6. Functional Requirements

Authentication, organizations, events, tickets, orders, payments, analytics, notifications.

Detailed content to be completed collaboratively during implementation. Each chapter will expand into multiple sections including diagrams, requirements, user stories, acceptance criteria, and engineering decisions.

7. Non-Functional Requirements

Performance, scalability, security, accessibility, localization, backups.

Detailed content to be completed collaboratively during implementation. Each chapter will expand into multiple sections including diagrams, requirements, user stories, acceptance criteria, and engineering decisions.

8. Architecture

API-first modular monolith, Laravel, React, Redis, PostgreSQL, queues, caching.

Detailed content to be completed collaboratively during implementation. Each chapter will expand into multiple sections including diagrams, requirements, user stories, acceptance criteria, and engineering decisions.

9. Database Design

Entity list, relationships, indexing strategy, audit logging.

Detailed content to be completed collaboratively during implementation. Each chapter will expand into multiple sections including diagrams, requirements, user stories, acceptance criteria, and engineering decisions.

10. API Design

REST endpoints, versioning, authentication, error responses, OpenAPI.

Detailed content to be completed collaboratively during implementation. Each chapter will expand into multiple sections including diagrams, requirements, user stories, acceptance criteria, and engineering decisions.

11. UI/UX

Organizer dashboard, attendee portal, admin portal, responsive layouts.

Detailed content to be completed collaboratively during implementation. Each chapter will expand into multiple sections including diagrams, requirements, user stories, acceptance criteria, and engineering decisions.

12. Testing

Unit, feature, API, integration, performance, security testing.

Detailed content to be completed collaboratively during implementation. Each chapter will expand into multiple sections including diagrams, requirements, user stories, acceptance criteria, and engineering decisions.

13. DevOps

Docker, CI/CD, deployment, monitoring, logging, release workflow.

Detailed content to be completed collaboratively during implementation. Each chapter will expand into multiple sections including diagrams, requirements, user stories, acceptance criteria, and engineering decisions.

14. Roadmap

Sprint plan, milestones, release strategy, future enhancements.

Detailed content to be completed collaboratively during implementation. Each chapter will expand into multiple sections including diagrams, requirements, user stories, acceptance criteria, and engineering decisions.

Appendix

Future versions will include ER diagrams, sequence diagrams, class diagrams, OpenAPI specification, ADRs, deployment topology, and complete module documentation.
